

# **HTML5 - Day - 2 Hands On - Sana Naveen**

## **Problem 1**

### **Problem Statement :**

1. Create two HTML pages and link them using navigation links
2. Add a navigation bar with Home and Contact links
3. Create a registration form with:
  - Name
  - Email
  - Password
  - Gender (radio buttons)
  - Course selection (dropdown)

### **Code :**

#### **File 1:**

Home.html

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <title>Home Page</title>
</head>
<body>

    <nav>
        <a href="home.html">Home</a> |
        <a href="contact.html">Contact</a>
    </nav>

    <hr>

    <h1>Welcome</h1>
    <p>This is the home page.</p>

    <h1>Registration Form</h1>

    <form>
        <label>Name:</label><br>
        <input type="text" name="name" placeholder="Enter your name" required>
        <br><br>
        <label>Email:</label><br>
        <input type="email" name="email" placeholder="Enter your email" required>
        <br><br>

        <label>Password:</label><br>
        <input type="password" name="password" placeholder="Enter password" required>
```

```

<br><br>
<label>Gender:</label><br>
<input type="radio" name="gender" value="Male" required> Male
<input type="radio" name="gender" value="Female"> Female
<br><br>

<label>Select Course:</label><br>
<input type="text" name="course" list="courses" placeholder="Choose or type course"
required>

<datalist id="courses">
    <option value="Java">
    <option value="Python">
    <option value="Web Development">
    <option value="Data Science">
</datalist>

<br><br>

<input type="submit" value="Register">

</form>

</body>
</html>

```

**File 2:**

```

Contact.html
<!DOCTYPE html>
<html lang="en">

abc@email.com

**Explanation :**

This project consists of two HTML5 pages connected using navigation links. Both pages use the standard HTML structure with `<!DOCTYPE html>`, `<html>`, `<head>`, and `<body>`. The `<nav>` element contains anchor (`<a>`) tags that link `home.html` and `contact.html` using relative paths, allowing users to switch between pages.

The Home page includes a registration form built with `<form>` and various input elements such as text, email, password, and radio buttons. The required and placeholder attributes are used for basic validation and user guidance. A `<datalist>` element provides suggested course options while still allowing custom input.

The Contact page displays simple contact information and maintains consistent navigation. Overall, this demonstrates a basic multi-page website with working links and form elements using only HTML.

## Problem 2

### Problem Statement :

A small coaching institute wants a basic static website with multiple pages so students can easily navigate between sections like Home, Courses, and Contact.

- Create 3 HTML pages:
- index.html (Home)
- courses.html
- contact.html
- Use:
  - <nav> element to create a navigation menu
  - <a> anchor tags for navigation
  - Navigation menu should appear on all pages
  - Use relative paths to link pages
  - Include at least:
    - One internal anchor link (#section)
    - One external link (e.g., institute's social media)

### Code :

#### File 1: Home

```
!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Prep Coaching Institute - Home</title>
</head>

### **Explanation :**

This project consists of three interconnected HTML5 pages: Home, Courses, and Contact, forming a simple multi-page website. Each page follows the standard HTML structure with <!DOCTYPE html>, <html>, <head>, and <body> elements. The <nav> element is used to create a consistent navigation menu across all pages, and <a> anchor tags use relative paths to link between ins\_home.html, courses.html, and ins\_contact.html.

The Home page includes an internal anchor link (#about) that navigates to the About section within the same page, as well as an external link to Instagram using target="\_blank" to open it in a new tab. The Courses page displays course offerings using an unordered list (<ul>), and the Contact page provides institute contact details. Overall, the website demonstrates structured content organisation, working navigation, internal and external linking, and clean multi-page HTML design without CSS or JavaScript.

## Problem 3

### Problem Statement :

An institute wants a basic student registration form with built-in validation to reduce incorrect submissions.

Create an HTML webpage that includes:

Create a form with following input types:

- text (Name)
- email
- tel
- number (Age)
- date

Use HTML5 built-in validation:

- required
- min, max
- pattern (for phone number)

Add submit button

### Code :

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <title>Student Registration Form</title>
</head>
<body>

<h1>Student Registration Form</h1>

<form>

    <label for="name">Full Name:</label><br>
    <input type="text" id="name" name="name"
        placeholder="Enter your full name"
        required>
    <br><br>

    <label for="email">Email Address:</label><br>
    <input type="email" id="email" name="email"
        placeholder="Enter your email"
        required>
    <br><br>

    <label for="phone">Phone Number:</label><br>
    <input type="tel" id="phone" name="phone"
        placeholder="10-digit mobile number"
        pattern="[0-9]{10}">

</form>
```

```
    required>
<br><br>

<label for="age">Age:</label><br>
<input type="number" id="age" name="age"
      min="6" max="60"
      required>
<br><br>

<label for="dob">Date of Birth:</label><br>
<input type="date" id="dob" name="dob"
      required>
<br><br>

<input type="submit" value="Register">

</form>

</body>
</html>
```

## Code Screenshot :

45
46        <input type="submit" value="Register">
47
48    </form>
49
50 </body>
51 </html>
```

**Output Screenshot :**

# Student Registration Form

Full Name:

Email Address:

Phone Number:

Age:

Date of Birth:

**Explanation :**

This HTML code creates a student registration form using HTML5. It includes input types like text, email, tel, number, and date. Built-in validation is applied using required, min, max, and pattern attributes to restrict invalid data. The browser automatically checks the inputs before submission without using JavaScript.

## Problem 4

### Problem Statement :

A training portal website has multiple levels of pages and users often get confused about where they are. The company wants breadcrumbs for better navigation.

Pages:

- Home
- Courses
- Web Development
- HTML Course

Implement:

- <nav> for main menu
- Breadcrumb navigation using anchor tags
- Example:
- Home > Courses > Web Development > HTML

Use:

- Hierarchical linking
- Relative paths

Breadcrumb should update based on page hierarchy

### Code :

#### File 1: Home

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <title>Home - Training Portal</title>
</head>
<body>

    <nav>
        <a href="tr_home.html">Home</a> |
        <a href="courses/tr_course.html">Courses</a>
    </nav>

    <hr>

    <nav>
        Home
    </nav>

    <h1>Training Portal</h1>
    <p>Welcome to our professional training platform.</p>

</body>
</html>
```

#### File 2: Course

```
<!DOCTYPE html>
```

```

# Courses

- [Web Development](#)

## **Explanation :**

This project is a three-page hierarchical website built using HTML5 and relative paths. The Home page links to the Courses page, which is stored inside a courses folder, and the Courses page links to the HTML course page inside a subfolder (web\_development). Navigation is implemented using the `<nav>` element and anchor (`<a>`) tags. Relative paths like `..` and `../..` are used to move between folder levels. The final page also displays breadcrumb-style navigation to show the page hierarchy (Home > Courses > Web Development > HTML).

## Problem 5

### Problem Statement :

An online learning platform wants to enhance user experience by showing course progress, skill levels, and suggested inputs while filling the form.

Create an enrollment form using:

- <datalist> for course suggestions
- <progress> to show enrollment completion
- <meter> to indicate skill level (Beginner–Advanced)

Include modern input types:

- email
- range
- number

Use built-in validation

### Code :

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Course Enrollment Form</title>
</head>
<body>

<header>
  <h1>Virtual Learning Platform</h1>
  <p>Course Enrollment Form</p>
</header>

<main>

<section>
  <h2>Enroll in a Course</h2>

  <form>

    <label for="name">Full Name:</label><br>
    <input type="text" id="name" name="name"
      placeholder="Enter your full name"
      required>
    <br><br>

    <label for="email">Email Address:</label><br>
```

```
<input type="email" id="email" name="email"
      placeholder="Enter your email"
      required>
<br><br>

<label for="course">Select Course:</label><br>
<input type="text" id="course" name="course"
      list="courses"
      placeholder="Choose or type course"
      required>

<datalist id="courses">
  <option value="HTML">
  <option value="CSS">
  <option value="JavaScript">
  <option value="Python">
  <option value="Data Science">
</datalist>
<br><br>

<label for="age">Age:</label><br>
<input type="number" id="age" name="age"
      min="16" max="60"
      required>
<br><br>

<label for="skill">Select Skill Level (1-10):</label><br>
<input type="range" id="skill" name="skill"
      min="1" max="10" value="5">
<br><br>

<label>Skill Level Indicator:</label><br>
<meter min="0" max="10" value="5">
  5 out of 10
</meter>
<br><br>

<label>Enrollment Completion:</label><br>
<progress value="70" max="100"></progress>
<br><br>

<input type="submit" value="Enroll Now">
</form>
</section>

</main>
```

```

<footer>
    <p>2026 Online Learning Platform</p>
</footer>

</body>

Ram

Email Address:

abc@gmail.com

Select Course:

Python

Age:

16

Select Skill Level (1-10):

Skill Level Indicator:

Enrollment Completion:

**Enroll Now**

2026 Online Learning Platform

**Explanation :**

This HTML document creates a course enrollment form using HTML5 semantic elements like <header>, <main>, <section>, and <footer>. The form includes modern input types such as email, number, and range, along with built-in validation using the required, min, and max attributes. A <datalist> provides course suggestions while still allowing custom input. The <meter> element visually represents the user's skill level, and the <progress> element shows enrollment completion status.
